

Market Intelligence Research Brief

Student Name: Raghad Almutairi

Date: October 5, 2026

Topic/Company: Saudi Residential Rental Housing Market (Riyadh, Jeddah, Dammam, Al-Khobar)

1. Research Objective

Briefly describe the business question or decision this market intelligence is intended to support.

Objective: Which of Riyadh, Jeddah, Dammam, or Al-Khobar should a residential rental investor evaluate first for new rental housing, based on rental price patterns in internal listing data and current external market signals? This work supports an early-stage prioritization decision, not a final investment decision.

2. Scope of Research

Define what was included and excluded in this research.

- **Markets or industries covered:** Residential rental housing (villas, houses, floors, and apartments) in Riyadh, Jeddah, Dammam, and Al-Khobar. Excluded: commercial property, land, for-sale housing, and cities outside these four.
 - **Competitor types included:** Institutional developers and government-backed players (e.g., ROSHN, NHC, Dar Al Arkan), REITs and built-to-rent operators; individual landlords and property managers noted briefly as a segment. Excluded: detailed company-level profiling.
 - **Timeframe considered:** Internal dataset scraped in 2021; external signals from 2025-2026. External research was run on 5 October 2026 (signal capture date).
 - **Key constraints (e.g., limited research hours):** Limited Quick Research time (one Fast-mode project with six topics); no-code QuickSuite workflow only; the dataset contains rents only (no purchase prices, vacancy, or competition data), so yield or ROI analysis is out of scope.
-

3. Research Approach

Summarize how AI-assisted research was conducted.

- **Types of questions asked:** Descriptive (median rent by city in the dataset), comparative (growth, supply, and competition across the four cities), regulatory (rent freeze, foreign ownership, Ejar), and reliability questions (where sources conflict and what cannot be concluded).
 - **How research effort was prioritized:** I ran one focused Quick Research project in Fast mode with six topics tied to the investor decision, set preferred sources (government bodies, JLL, CBRE, Knight Frank, Colliers, Savills), and revised the plan twice to state that the dataset has no occupancy or purchase-price data, so research time went to what the dataset cannot show. The agent's dataset figures were cross-checked against the raw CSV.
 - **Tools used within Amazon Quick Suite:** Spaces (dataset, research report, and outputs), Quick Research (external market signals), and a custom chat agent, Market Intelligence Agent - Saudi Rental Housing (Market Analysis, Reliability Evaluation, and Market Intelligence Brief).
-

4. Key Market Insights

List 3–5 synthesized insights relevant to leadership decision-making.

Insight 1: Riyadh's five-year rent freeze caps near-term income growth

- **Insight Summary:** A five-year rent freeze effective 25 September 2025 prohibits rent increases within Riyadh's urban boundaries through about 2030, ending the city's strong pre-freeze growth for existing leases.
- **Supporting Evidence or Signals:** EXTERNAL: REGA decree, K&S Law analysis, and Economy Middle East (Sep 2025) confirm the freeze, with fines up to 12 months' rent. Cavendish Maxwell: Riyadh apartments +10.3% and villas +14.4% YoY in H1 2025; Q1 2026 quarterly rents fell 2.8% (apartments) and 1.2% (villas), with YoY growth near 6% and 5% (Gulf News / Cavendish Maxwell). DATASET (2021): Riyadh median annual rent SAR 80,000 - a baseline only, predating the freeze.
- **Why This Insight Matters:** Riyadh has the strongest demand signals, but landlord income growth is legally capped, which changes the investment case for the largest market.
- **What would change our mind:** An official REGA announcement modifying, shortening, or exempting property types from the freeze.

Insight 2: Dammam and Al-Khobar offer steady growth with lower competition

- **Insight Summary:** Dammam and Al-Khobar show steady rent growth of about 2-3% a year with no rent freeze, unrestricted foreign ownership, and fragmented competition, making them the most favorable risk-adjusted cities to evaluate first.
- **Supporting Evidence or Signals:** EXTERNAL: Dammam apartments +3.2% and villas +2.1% YoY in Q1 2026 (Gulf News / Cavendish Maxwell); the Eastern Province gets 132,300 of 854,800 planned units by 2030, 15.5% (Fast Company ME / JLL, 2025); foreign ownership is unrestricted outside the 170 designated zones (REGA / JLL, Jan 2026); JLL describes institutional concentration as low. DATASET (2021): Dammam median rent SAR 60,000 and Al-Khobar SAR 75,000, the two lowest of four cities (SAR 60,000 and 65,000 after removing duplicate listings, from only 123 and 83 unique listings).
- **Why This Insight Matters:** It gives a mid-scale private investor the most open regulatory and competitive field, although lower rents also mean lower revenue per unit.
- **What would change our mind:** A REGA announcement extending the rent freeze to Dammam or Al-Khobar.

Insight 3: Jeddah has the highest rents, but its supply risk must be read regionally

- **Insight Summary:** Jeddah had the highest median rent in the 2021 dataset (SAR 95,000), but its recent growth is moderate and uneven, and the large western supply pipeline is regional, not Jeddah-specific.
- **Supporting Evidence or Signals:** DATASET (2021): Jeddah median annual rent SAR 95,000 (SAR 100,000 after removing duplicates), the highest of the four; 39.3% of listings have a pool and 17.1% are furnished. EXTERNAL: apartments +4.7% and villas -2.7% YoY in H1 2025, then +2.7% and about +1% in Q1 2026 (Cavendish Maxwell / Gulf News); 382,500 planned units across all of Western KSA including NEOM, Red Sea and Qiddiya (Fast Company ME / JLL, 2025), versus about 12,700 Jeddah-specific units in H2 2025 (Cavendish Maxwell).
- **Why This Insight Matters:** Jeddah offers the highest revenue potential per unit, but investors must separate local supply from the mega-project pipeline before judging absorption risk.
- **What would change our mind:** Jeddah-specific residential vacancy data above 15%, which would show oversupply locally.

Insight 4: Institutional competition is concentrated in Riyadh

- **Insight Summary:** PIF-backed developers (ROSHN, NHC, Diriyah Company) dominate Riyadh's residential development, Jeddah has moderate institutional activity, and

Dammam and Al-Khobar remain fragmented.

- **Supporting Evidence or Signals:** EXTERNAL: ROSHN's Sedra project targets 30,000 units in Riyadh (PIF / ROSHN, 2025); about 17 REITs are listed on Tadawul, mostly weighted to commercial and retail assets (Argaam, 2025); the built-to-rent market is about USD 0.33 billion in 2025, projected at USD 0.87 billion by 2031 (Mordor Intelligence, single source); K&S Law and JLL rate Riyadh concentration highest and the Eastern Province lowest. DATASET: contains no competition data.
- **Why This Insight Matters:** Private investors face the highest barriers in Riyadh and the most open field in the Eastern Province, though no market-share figures exist to size the gap.
- **What would change our mind:** A major institutional developer (e.g., ROSHN or Dar Al Arkan) announcing a large build-to-rent project in Dammam or Al-Khobar.

5. Visual Evidence (Optional but Recommended)

Reference any charts, dashboards, or visualizations used to support the insights.

- **Chart Type:** Grouped bar chart (two panels), generated by Quick Research: "Saudi Residential Rental Growth by City and Segment" (Figure 6 in the Appendix).
- **What the visualization shows:** Year-over-year rent growth for apartments and villas, comparing H1 2025 with Q1 2026. Riyadh slowed from 10.3% (apartments) and 14.4% (villas) to about 6% and 5%. Jeddah is lower and uneven (villas -2.7% in H1 2025, about +1% in Q1 2026). Dammam shows steady Q1 2026 growth of 3.2% (apartments) and 2.1% (villas); it has no H1 2025 figure, and Al-Khobar has no separate figures.
- **How it supports the insight:** It supports Insight 1 (Riyadh's deceleration after the freeze), Insight 2 (steady Eastern Province growth), and Insight 3 (Jeddah's uneven villa segment). Limitation: the bars come from different sources, periods, and geographies, so they are not strictly like-for-like.

6. Confidence Assessment

Evaluate the reliability of the insights using the criteria below.

- **Source quality:** Mixed to strong. Regulatory facts come from primary or professional sources; growth and competition figures rely on consultancies and, in places, a single source.
 - **Insight 1:** High - REGA (regulator), K&S Law, Economy Middle East; growth figures from Cavendish Maxwell.
 - **Insight 2:** Medium - Gulf News citing Cavendish Maxwell (single source for growth); JLL (qualitative competition view); REGA/JLL for ownership rules.

- **Insight 3:** Medium - Cavendish Maxwell for Jeddah growth; Fast Company ME citing JLL for the pipeline.
- **Insight 4:** Medium - K&S Law and JLL (qualitative); PIF/ROSHN for project scale; Mordor Intelligence for build-to-rent size (single source, undisclosed method).
- **Consistency across sources:** Directional findings agree, but several comparisons are not independent or not like-for-like.
 - **Insight 1:** All external sources agree the freeze exists; Riyadh villa growth conflicts (Cavendish Maxwell +14.4% in H1 2025 vs. CBRE +11.6% in Q3 2025, different periods).
 - **Insight 2:** The dataset ranking matches the research, but the research was given the dataset medians as a baseline, so this is not independent confirmation; Dammam growth appears in one source and Al-Khobar has no separate figure.
 - **Insight 3:** Jeddah's rent premium is dataset-based; villa softness comes from one consultancy; the 382,500-unit pipeline is regional.
 - **Insight 4:** Sources agree Riyadh is most concentrated, but none gives market-share data and the dataset has no competition data.
- **Timeliness of information:** External signals are current (Sep 2025 to Q2 2026) and were captured on 5 October 2026; the dataset is from 2021 and is stale for absolute rent levels.
 - **Insight 1:** Current (Sep 2025 to Q1 2026); the 2021 dataset predates the freeze.
 - **Insight 2:** Growth data from Q1 2026; ownership rules from Jan 2026; rent levels from 2021.
 - **Insight 3:** Growth from H1 2025 to Q1 2026; pipeline from 2025; rent premium from 2021.
 - **Insight 4:** 2025 sources; competition can change quickly with new project announcements.
- **Overall confidence level:** Medium overall.
 - **Insight 1:** High (existence of the freeze) / Medium (size of its impact on new leases).
 - **Insight 2:** Medium.
 - **Insight 3:** Medium.
 - **Insight 4:** Medium.

7. Limitations and Risks

Document known gaps, assumptions, or areas of uncertainty.

- **Missing data:** Gaps that limit what can be concluded.
 - No purchase prices, so no yield or ROI can be calculated.
 - No published residential vacancy data by city; market tightness relies on proxies such as Ejari contract volumes.
 - No separate Al-Khobar growth rate (the research groups it with Dammam) and no quantitative market-share data.

- The dataset does not state the rent frequency (assumed annual) and contains no competition data.
- **Conflicting signals:** Where sources disagree or cannot be compared.
 - Riyadh villa growth: Cavendish Maxwell +14.4% (H1 2025) vs. CBRE +11.6% (Q3 2025), likely different periods and measurement.
 - Rent level vs. opportunity: Jeddah has the highest 2021 rents, yet the research favors Dammam and Al-Khobar on a risk-adjusted basis.
 - National villa values (-9.7%, CBRE Q2 2026) vs. Riyadh villa rents (positive) measure different things and should not be compared directly.
- **Potential bias or ambiguity:** Issues in data quality and independence.
 - A duplicate check found 2,197 exact duplicate rows of 3,718; only 1,521 unique listings remain (Riyadh 904, Jeddah 411, Dammam 123, Al-Khobar 83). Medians on unique listings keep the same city ranking (Jeddah 100,000; Riyadh 80,000; Al-Khobar 65,000; Dammam 60,000), but Dammam and Al-Khobar rest on small samples.
 - The dataset is 2021 asking rents from one platform (Aqar), with outliers (e.g., a 1 m2 listing, rents up to SAR 1.7 million) and implausibly low AC flags (51-64%), a listing-quality issue.
 - Dataset medians were given to the research as a baseline, so agreement between them is not independent confirmation.
 - The 382,500-unit pipeline covers Western KSA including NEOM, not Jeddah alone; the build-to-rent market size is a single-source estimate.

8. Strategic Implications

Explain how leadership should interpret and use this intelligence.

- **What decisions could this inform?** City shortlisting: evaluate Dammam and Al-Khobar first, then Jeddah, then Riyadh.
 - Product positioning: Al-Khobar's 1.5% furnished share in the 2021 dataset suggests a possible underserved furnished niche, to be verified with current data.
 - Riyadh timing: monitor the freeze's impact for 12-18 months and watch for any extension to other cities before committing.
- **What should *not* be concluded from this research?** That any city is the best place to invest: the evidence supports which city to evaluate first, not an investment decision.
 - Investment yield or ROI: the dataset has rents only, with no purchase prices, cap rates, or operating costs.
 - Current rent levels: the 2021 dataset shows relative city rankings, not today's prices.
 - Al-Khobar-specific growth: the research reports it only as similar to Dammam.

9. Summary for Leadership

Provide a concise executive summary (5–7 sentences).

Executive Summary:

Based on 2021 rental listing data and 2025–2026 market research, Dammam and Al-Khobar are the most favorable cities for a residential rental investor to evaluate first, not yet to invest in. They combine lower 2021 median rents (about SAR 60K–75K, implying lower revenue per unit), steady 2–3% annual growth, no rent freeze, unrestricted foreign ownership, and the smallest regional supply pipeline, with low institutional competition. Riyadh has the strongest demand but is constrained by a legally binding five-year rent freeze (high confidence it exists, medium confidence on its impact), while Jeddah has the highest dataset rents but needs Jeddah-specific supply data because the 382,500-unit pipeline covers all of Western KSA. Overall confidence is Medium: the directional city ranking is reasonably supported, but rent levels date from 2021, competition evidence is qualitative, and only 1,521 of the 3,718 dataset listings are unique. The most important next step is to obtain current rent and purchase-price data for Dammam and Al-Khobar so this intelligence can be tested as an investable case.

Figure 2: Market Intelligence Agent - Saudi Rental Housing: configuration with purpose, rules, and the Space as knowledge source

The screenshot displays the 'Configure chat agent' interface for the 'Market Intelligence Agent - Saudi Rental Housing'. The interface is divided into several sections:

- AGENT PERSONA:** This section contains the 'Instructions' for the agent, which define its role as a Market Intelligence Agent serving senior business leaders and investors. It outlines key operational rules, such as using medians instead of averages, labeling claims as 'DATASET' or 'EXTERNAL RESEARCH', and producing a Market Intelligence Brief. A 'Refine' button is located at the bottom right of the instructions text area.
- Reference documents:** This section allows users to attach relevant templates, workflows, and methodologies to guide the agent's behavior. It includes an 'Upload Files' button and a note about the supported file formats (pdf, txt, html, md, csv, doc, docx) and the 100k character limit.
- KNOWLEDGE SOURCES (1):** This section shows the knowledge sources linked to the agent. In this case, 'Market Intelligence - Saudi Rental Housing' is listed. Buttons for 'Create' and 'Link spaces' are present.
- ACTIONS (0):** This section is currently empty, showing where actions can be configured for the agent. Buttons for 'Create' and 'Link actions' are visible.

On the right side of the interface, there is a preview of the agent's chat interface. It shows a welcome message and a list of suggested questions, such as 'Compare rental price medians across Riyadh, Jeddah, Dammam, and...' and 'Produce a Market Intelligence Brief with key insights and strategic...'.

The second screenshot shows a modal window titled 'Market Intelligence Agent - Saudi Rental Housing' with a 'Copy link' button. The modal is divided into two main sections:

- Description:** This section provides a summary of the agent's purpose and instructions. It states that the agent is a rigorous market intelligence analyst who delivers objective, evidence-based insights on Saudi residential rental markets. It also includes the creation details: 'Created by VocFirst16237011 VocLast16237011' and 'Last modified 10/5/2026, 9:55:02 AM'.
- Capabilities:** This section shows the agent's capabilities, categorized into 'Knowledge' and 'Actions'. A table lists the capabilities:

Name	Description	Last modified
Market Intelligence - Saudi Rental Ho...	Produce a leadership-rea...	34 minutes ago

At the bottom of the modal, there are 'Edit' and 'Chat' buttons.

Figure 3: Agent test query: median annual rent by city from the dataset

Figure 4: Quick Research plan: six topics (after two plan revisions)

The screenshot displays the Amazon Quick Research interface for a research plan titled "Saudi Arabia Residential Rental Market Analysis 2025-2026: City Comparison for Investment Priority". The interface is divided into several sections:

- Research objective:** Research the current state of the Saudi residential rental market in Riyadh, Jeddah, Dammam, and Al-Khobar for 2025-2026, to help a residential rental investor decide which city to evaluate first.
- Research materials:** Includes web search (enabled) and file uploads (disabled). Preferred websites listed: stats.gov.sa, rega.gov.sa, momah.gov.sa, knightfrank.com, jll.com, cbre.com, colliers.com, savills.com. Websites to avoid: social media, forums, blogs.
- Topics to explore:** Six topics are listed, each with a brief description:
 - Rental Price Trends and Growth Rates by City:** Analyze year-over-year and quarterly rental price movements for family residential rentals (villas, houses, floors, apartments combined) across Riyadh, Jeddah, Dammam, and Al-Khobar from 2025-2026. Compare growth rates against the internal 2021 dataset baseline (Jeddah 95,000 SAR, Riyadh 80,000 SAR, Al-Khobar 75,000 SAR, Dammam 60,000 SAR annual rent) to identify acceleration or deceleration patterns. Flag any conflicting figures between sources and identify rent freeze policies or regulatory interventions affecting pricing.
 - Population Growth and Demographic Drivers:** Examine population growth rates, expatriate influx, and demographic shifts in each city that drive rental demand. Assess how Vision 2030 initiatives and economic diversification are attracting residents and workers to specific urban centers between 2025-2026.
 - Housing Supply Dynamics and Major Development Projects:** Identify major residential development projects, new housing completions, and pipeline supply in each city. Evaluate Vision 2030 housing programs, Sakani initiatives, and private sector projects that impact family residential rental supply availability and affordability in 2025-2026, comparing overall rental supply without splitting by property type unless sources differentiate.
 - Vacancy and Occupancy Rates:** Assess current vacancy rates, occupancy signals, and market absorption rates across the four cities. Analyze Ejar platform data and rental contract registrations to gauge market tightness and identify supply-demand imbalances in 2025-2026, drawing from external sources since the internal 2021 dataset contains no occupancy or vacancy data.
 - Institutional Players and Competitive Landscape:** Profile major institutional investors and built-to-rent operators in each city, evaluating market concentration, competitive positioning, and barriers to entry for new rental investors in 2025-2026. Briefly mention individual landlords and property management companies as a segment within the broader competitive landscape.
 - Regulatory Environment and Policy Support:** Review rental market regulations, tenant protections, landlord incentives, and government support mechanisms including Vision 2030 housing programs. Assess how policy changes between 2021 and 2026 affect rental market attractiveness and investor returns.

On the right, there is a "Research" section with a "Start researching" button and a "Revision history" section.

Figure 5: Quick Research report: executive summary (captured 5 October 2026)

The screenshot displays the Amazon Quick Research interface for a research report titled "Saudi Arabia Residential Rental Market Analysis 2025-2026: City Comparison for Investment Priority". The interface is divided into several sections:

- Research:** Research the current state of the Saudi residential rental market in Riyadh, Jeddah, Dammam, and Al-Khobar for 2025-2026, to help a residential rental investor decide which city to evaluate first.
- Materials:** Includes web search (enabled) and file uploads (disabled). Preferred websites listed: stats.gov.sa, rega.gov.sa, momah.gov.sa, knightfrank.com, jll.com, cbre.com, colliers.com, savills.com. Websites to avoid: social media, forums, blogs.
- Rate report:** Five stars rating.
- Executive Summary:** For a residential rental investor evaluating Riyadh, Jeddah, Dammam, and Al-Khobar, the analysis points to **Dammam/Al-Khobar as the strongest first-evaluation market**, followed by Jeddah, with Riyadh—despite having the most powerful demand fundamentals—ranking third due to a critical regulatory constraint. Since the internal 2021 dataset was compiled, the market has been reshaped by Vision 2030—driven urbanization, a new foreign ownership law effective January 2026^[1,2], mandatory digital lease registration via Ejar^[3], and most consequentially, a five-year rent freeze imposed on Riyadh in September 2025^[4] that caps landlord income growth through 2030. Dammam and Al-Khobar offer the most favorable risk-adjusted profile: steady 2–3% annual rent growth^[5], no rent freeze, unrestricted foreign ownership^[2], competitive pricing attracting spillover demand from Riyadh, and a fragmented competitive landscape with low institutional concentration—leaving more room for mid-scale investors. Jeddah ranks second, benefiting from a \$431.3 billion western mega-project pipeline driving long-term employment growth^[6] and moderate positive rent trends, though its larger supply pipeline introduces absorption risk. Riyadh delivers the strongest demand signals—apartment rents rose 10.3% year-over-year in H1 2025^[7] and Ejar contract values surged 85% in Q1 2026^[8]—but the rent freeze, intense competition from PIF-backed developers like ROSHN^[9], and the highest entry costs significantly constrain near-term income upside. Notably, Saudi Arabia's built-to-rent sector remains nascent at approximately \$0.33 billion^[10], suggesting that early institutional entrants in less contested markets stand to benefit disproportionately as the sector matures.
- Comments:** A section for adding comments, with a "Research" button and a "Summarize" button.

 MARKET INTELLIGENCE AGENT – SAUDI RENTAL HOUSING

Here is the final Market Intelligence Brief, designed for leadership review at approximately one-page length.

Market Intelligence Brief — Saudi Residential Rental Housing

Market Intelligence Brief

Saudi Residential Rental Housing: City Prioritization for New Investment *Prepared: October 2026 | Sources: 2021 AQAR Rental Dataset (~3,700 listings); Quick Research Report "Saudi Arabia Residential Rental Market Analysis 2025–2026"*

Objective & Scope

Determine which Saudi city — Riyadh, Jeddah, Dammam, or Al-Khobar — a residential rental investor should evaluate first, based on rental price patterns (2021 dataset) and current market signals (2025–2026 external research). This brief synthesizes both sources, flags limitations, and provides actionable next steps.

Key Insights

This completes the three core deliverables: Market Analysis, Reliability & Confidence Evaluation, and Market Intelligence Brief.

Market Intelligence Agent – Saudi Rental Housing

Key Prompts Used

Quick Research objective: Research the current state of the Saudi residential rental market in Riyadh, Jeddah, Dammam, and Al-Khobar for 2025-2026 (price trends, supply and demand, vacancy, competitors), supplementing a 2021 listings dataset, citing every source with its date and flagging conflicting figures.

Market Analysis prompt: Using the 2021 Aqar dataset and the Quick Research report, produce a Market Analysis with competitive landscape, trends, opportunities and risks, labeling every claim DATASET or EXTERNAL RESEARCH and flagging where sources agree or conflict.

Reliability prompt: For each key insight give evidence (dataset vs. research), source quality, consistency, timeliness, gaps, a High/Medium/Low confidence level, and one data point that would change our mind; do not treat dataset-echoing research as independent confirmation.
